

Downstream Equipment Fabrication

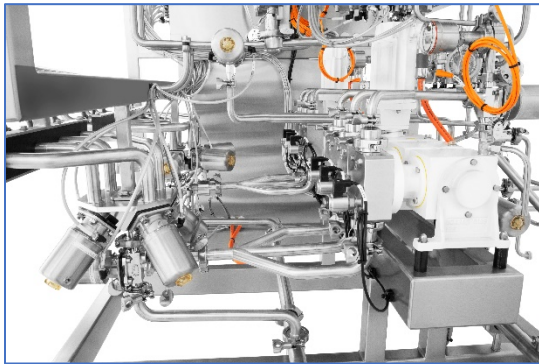

Our production with your design – or ours.

We develop and supply custom and standard systems for biotechnology and pharmaceutical customers who seek to take advantage of the benefits offered by our highly skilled workforce, procedure driven fabrication techniques and 20 years designing GMP scale process systems for Fortune 500 corporations across the USA, EU and Asia.

We are big enough to innovate – small enough to listen.

Tired of mega-product suppliers who sell you what they have – not exactly what you want, users come to YMC for a satisfying yet professional experience.

Decades of experience in creating downstream systems that include:

- Biosynthesis systems
- Chromatography – HPLC and LPLC
- Continuous multi-column chromatography
- Centrifuge skids
- Caustic dilution systems
- In-line buffer and solvent dilution
- Process developments skids
- TFF - UF/MF/DF – filtration skids
- OEM manufacture of private label systems
- Transfer panels/stations

From conception to completion—to in-house factory-acceptance testing (FAT)—our custom and standard equipment benefits from the attention of a unified team of seasoned engineers, fabricators, and technicians—all under one roof. And all with a single-minded dedication to building you a quality product.

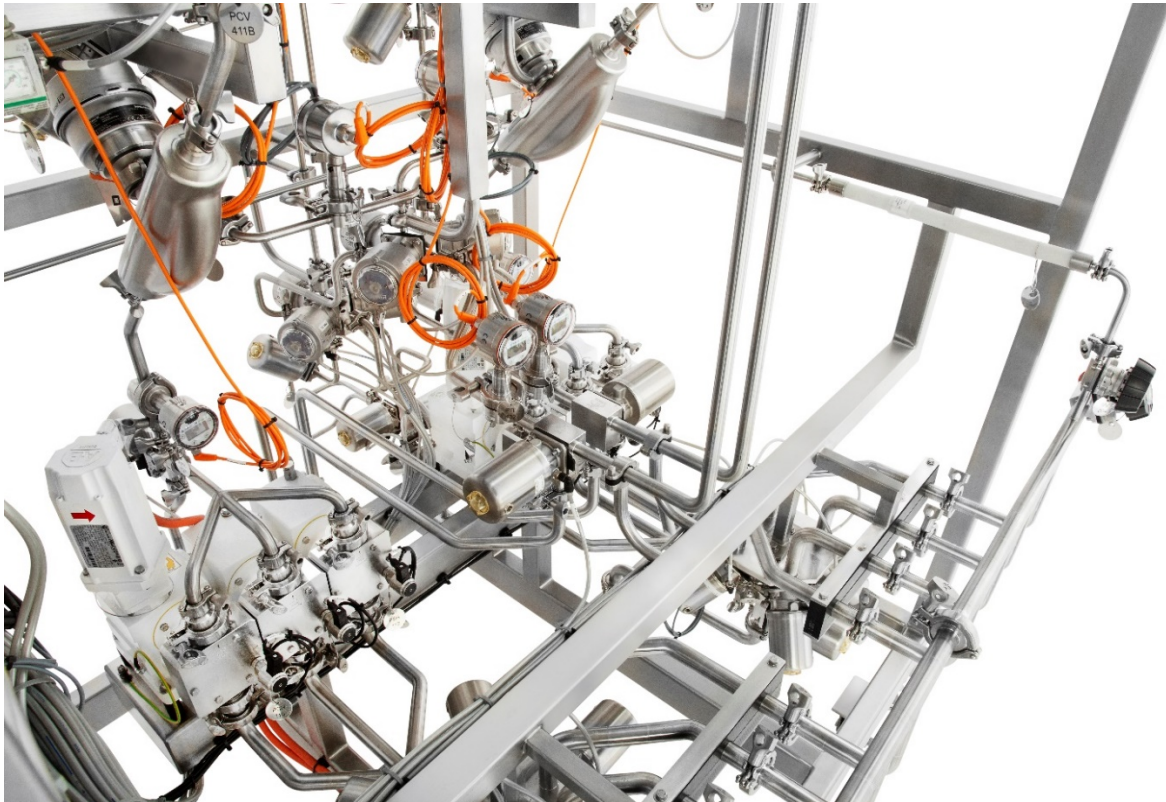

State-of-the-industry materials & shop

To ensure you receive the most robust and easy-to-maintain equipment, we work with virtually all state-of-the-industry materials—from any grade/gauge of stainless steel to advanced materials such as AL-6XN and Hastelloy. Our welding, fabrication, polishing, inspection and testing standards consistently exceed the highest global standards thanks to the rigorous Standard Operating Procedures and Quality Plans built in to everything we do. With hundreds of new projects every year coming through our 21,000 s.f. (2000 m²) facility, our project management, documentation, and turnover practices have been honed to deliver complete customer satisfaction as well.

Your software, our software, no software

Our expertise in PLC based (Rockwell / Allen Bradley) can be applied to your OEM or custom system for a turn-key project or you can bring to our hardware your team's software. Or we can build a "naked" skid and you can integrate into your site's central automation platform. We've delivered systems using in-house Emerson DeltaV (with our partner Rovisys) and customer supplied DeltaV. Talk to us about past custom work on Siemens and Wonderware.

To see how you can benefit from a higher standard of equipment—or to get answers to specific capabilities questions— please [click here](#) and let us know how we can help.
